Harness the Power of Collaboration

C-Meeting is an innovative platform that goes beyond the limits of traditional web-based communication by integrating audio and webcam support, document sharing, text chatting and more into intuitive all-in-one virtual meeting spaces.

C-Meeting enables you to bring together people throughout your organization in an instant. Meetings can be organized as a host-controlled broadcast or open forum. With C-Meeting you'll have the tools to reach your audience, share your message, and spur collaboration.

Grow Your Meeting

- **Joining the Conversation:** C-Meeting expands the limits of group collaboration, allowing a multitude of participants in a single meeting. Callers can join via PSTN or VoIP using either a telephone or web phone.
- **Integrating Video:** C-Meeting video participants can use any standard web camera. If more than 10 users publish webcams, users choose which video feeds to see on-screen. Users can also designate a floating webcam window, which can be moved freely around the screen.
- **Sharing Your Ideas:** Applications, documents, spreadsheets, presentations, videos, photographs, and even your full desktop can be shared within C-Meeting. A few clicks and you're ready to share a multitude of information.

Enhance Your Conversation

- **Control the Dialogue with Q&A:** Meeting hosts are able to moderate sessions using the Question & Answer feature. In a Q&A, users are muted until they virtually “raise their hand” and are acknowledged by the host.
- **Take a Poll:** Initiate a Voting session to ask questions, survey participants, or simply gather ideas. Results are available in an instant.
- **Chat:** In addition to its dynamic audio and video collaboration capabilities, C-Meeting features public and private text chat.

Enrich Your Experience

- **Record Your Meeting:** C-Meeting allows you to record the audio, the host’s video, and data shares during your meeting. Recordings can be played back on C-Meeting at a later time and are also available for download.
- **Integrate Your Schedule:** With C-Meeting, you can start your next meeting immediately or configure it to begin at a specific time in the future. The versatile scheduling features also effortlessly integrate with Microsoft Outlook.
- **Maintain Your Presence:** C-Meeting surpasses the limits of traditional, one-time collaboration tools by allowing users to keep an online presence between meetings. Each session is added as part of a user’s account – allowing you to easily keep track of all your meetings.

Accessing C-Meeting

- **Easy Access:** C-Meeting is completely browser-based, so there is no need for any participant download. (The C-Meeting browser plug-in is only required to share your desktop.)
- **Clean User Interface:** The elegantly designed C-Meeting interface allows each participant to collaborate with ease.
- **Secure Connection:** C-Meeting utilizes HTTPS/TLS to help ensure your connection is secure.
- **Multi-Language Support:** C-Meeting can be instantly adapted for international audiences. Current language support includes: English, German, Italian, Japanese, and Portuguese.

Mobile C-Meeting

In addition to its powerful browser-based interface, C-Meeting can be conveniently accessed straight from your iPad.

Available in the Apple App Store, C-Meeting for iPad combines the key elements of video, web, desktop, and application sharing into an intuitive, versatile app.

Even on-the-go, you can use C-Meeting to experience fully immersive collaboration.
